How risky is it?

The value of the fund can go down as well as up. You could lose money.

One way to gauge risk is to look at how much a fund's returns change over time. This is called "volatility".

In general, funds with higher volatility will have returns that change more over time. They typically have a greater chance of losing money and may have a greater chance of higher returns. Funds with lower volatility tend to have returns that change less over time. They typically have lower returns and may have a lower chance of losing money.

Risk rating

PFSL has rated the volatility of this fund as **medium**.

This rating is based on how much the fund's returns have changed from year to year. It doesn't tell you how volatile the fund will be in the future. The rating can change over time. A fund with a low risk rating can still lose money.

For more information about the risk rating and specific risks that can affect the fund's returns, see The Risks of Mutual Fund Investing section of the fund's simplified prospectus.

No guarantees

Like most mutual funds, this fund doesn't have any guarantees. You may not get back the amount of money you invest.

How has the fund performed?

This section tells you how units of the fund have performed over the past 10 calendar years. Returns are after expenses have been deducted. These expenses reduce the fund's returns.

Year-by-year returns

This chart shows how units of the fund performed in each of the past 10 calendar years. The fund dropped in value in 1 of the past 10 calendar years. The range of returns and change from year to year can help you assess how risky the fund has been in the past. It does not tell you how the fund will perform in the future.

Best and worst 3-month returns

This table shows the best and worst returns for units of the fund in a 3-month period over the past 10 calendar years. The best and worst 3-month returns could be higher or lower in the future. Consider how much of a loss you could afford to take in a short period of time.

	Return	3 months ending	If you invested \$1,000 at the beginning of the period
Best return	12.3%	January 31, 2021	Your investment would rise to \$1,123
Worst return	-17.9%	March 31, 2020	Your investment would drop to \$821

Average return

A person who invested \$1,000 in the fund 10 years ago now has \$1,776. This works out to an annual compound return of 5.9%.

Who is this fund for?

Investors who:

- are seeking superior capital growth;
- are planning to hold their investment for the long term; and
- have a medium tolerance for risk.

A word about tax

In general, you'll have to pay tax on any money you make on the fund including your share of the fund's earnings and on taxable capital gains from redeeming your investment. How much tax you pay depends on your tax rate, whether or not you hold the fund in a registered plan and the type of earnings of the fund (interest, dividends, capital gains, etc.). In general, you do not pay tax on your investments held in a registered retirement savings plan, tax-free savings account or other registered plan.

If you hold your investment outside of a registered plan, you will receive a tax slip showing your share of the fund's earnings. You must include the amounts shown in your income whether you get them in cash or have them reinvested. You must calculate your taxable capital gains from a redemption.

How much does it cost?

The following table shows the fees and expenses you could pay to buy, own and sell units of the fund. The fees and expenses - including any commissions - can vary among series of a fund and among funds. Higher commissions can influence representatives to recommend one investment over another. Ask about other funds and investments that may be suitable for you at a lower cost.
